EXPERIENCE as Programmer

Creative Assembly

Senior Engineer - Continuous Improvement / Nov 2022 – Present

As a Senior Engineer, I'm involved with multiple projects bringing a passion and mindset of continual improvement of development practice, delivering simple and effective solutions to improve developer flow and happiness.

Responsibilities:

- Make ongoing, effective productivity improvements across the studio and projects
- Induce change through an enthusiastic, collaborative, and responsive attitude with a strong ethos of continuous improvement and value delivery
- Develop, enhance, and maintain simple solutions delivering value to people and projects
- Foster a sustainable environment through the pursuit of low-maintenance solutions and a “less is more” mentality
- Proactively engage with projects and developers to identify pain points and opportunities for improvement
- Have a tangible positive impact on the effectiveness of our game development pipelines

Ubisoft Reflections

Senior Tools Programmer / Apr 2022 – Oct 2022

Tools Programmer / Apr 2020 – Apr 2022

One of my responsibilities as a Senior Tools Programmer is to develop, maintain and support critical tools to enhance the productivity of the studio's projects while keeping stakeholders informed and up to date. Another responsibility is to analyse projects and make ongoing, articulable productivity improvements while measuring wait times on technology and processes. I work in an agile, proactive and autonomous manner to identify needs and opportunities which deliver value to our pipeline productivity.

Enigma Interactive

Software Developer / Jun 2018 – Apr 2020

As a Software Developer, my responsibility is to create powerful websites, mobile applications and software for our clients. Also, debugging and troubleshooting projects before they get released to be sure that our clients will get the best from our company.

T C YEOH & Associates Dental Practice

Full-Stack Developer / Jan 2018 – May 2018

We needed to develop a platform that connects dentists and customers. For the front end, because we needed it to be a dynamic, real-time, beautiful site, we used angular 5. As for the back end, we used Firebase, a google service that allows you to create web and mobile applications without caring about servers.

DENTAL INDEX

Back-End Developer / Nov 2016 – Feb 2017

My responsibility was to create a robust back-end system written on NodeJS. We used MongoDB and ElasticSearch together for high efficiency and low cost. We also created a proxy server that provides security to the back-end and front-end services.

ACTIS CONSULTING

Full-Stack Developer / Jan 2017 – Mar 2017

We created a robust back-end system written on NodeJS. We used MongoDB and ElasticSearch together for the highest efficiency and lower cost we could get. We created a dynamic front-end application by using Angular 2. We also created a proxy server that provides security to the back-end and front-end services.

SIMPLE SMALL BUSINESS

Web Developer / Sep 2014 – Jun 2015

Creating and selling websites and android applications. Finding efficient methods to develop our projects and providing our clients with the best online services.

EDUCATION

7th EPAL LARISSA

Computer Science / 2011 – 2014

FREE CODE CAMP

WEB DEVELOPMENT CERTIFICATION / 2016 – 2016
